Japan Network Infrastructure Strategies (Japanese Version with Key English Language Reports)

AN IDC CONTINUOUS INTELLIGENCE SERVICE

As both service providers and enterprise networks continue to grow in scale and complexity, network availability, reliability, efficiency, and faster speeds become critical issues for effective network design and planning. IDC's Japan Network Infrastructure Strategies (Japanese Version with Key English Language Reports) service provides a comprehensive, in-depth analysis of Japan's network equipment market from the perspectives of equipment vendors, channels, and enterprise users. For each market segment covered, this service provides key trends, competitive analysis of leading equipment vendors, market analysis and forecasts, and essential guidance. In 2021, this service focuses on the network virtualization and automation market, as well as communication SP network equipment market for 5G.

Markets and Subjects Analyzed

- Router
- Ethernet switch
- Application delivery controller
- Wireless LAN
- Industrial network
- Network virtualization and automation

Core Research

- Japan Enterprise Networks Forecast
- Japan Networks Market Share
- Japan 5G Network Infrastructure Forecast
- Japan Datacenter Networks Forecast
- Japan Networking Enterprise User Survey
- Japan Industrial Network Equipment Forecast
- Japan Network Virtualization and Automation Forecast
- IDC FutureScape: Worldwide Mobility and Telecommunications 2021 Predictions — Japan Implications

Note: All documents will be delivered in the local language with the exception of up to two market share and market forecast documents, which will be delivered in both English and the local language.

In addition to the insight provided in this service, IDC may conduct research on specific topics or emerging market segments via research offerings that require additional IDC funding and client investment.
