

Datacenter and Multicloud Networking

AN IDC CONTINUOUS INTELLIGENCE SERVICE

IDC's *Datacenter and Multicloud Networking* service provides continuous market data and analysis of the worldwide markets for datacenter and multicloud networking, including software, hardware, and cloud services. As applications migrate to public clouds, the datacenter and its network are becoming increasingly distributed, driving a need for elastically scalable architectures, declarative policy-based automation, simpler operations, better abstractions, and seamless operation with public clouds. This service provides research and analysis on how these trends are reshaping the datacenter and multicloud networking markets.

Markets and Subjects Analyzed

- Datacenter network infrastructure
- Ethernet switching in the datacenter
- Datacenter network spending, segmented by technology/region
- Growth of bare metal ODM/white-box switching
- Network disaggregation, including open source network operating systems such as SONiC
- Software-defined networking (SDN) and intent-based networking
- Automation of datacenter networks
- Application delivery network infrastructure
- IaaS networking (network services provided by IaaS cloud giants)
- Networking for converged and hyperconverged infrastructure
- IDC Innovators documents on networking start-ups
- Datacenter networking for hybrid/multicloud environments
- Ingress controllers and service meshes
- Evolution of open source networking technologies
- Software-defined WAN (SD-WAN) markets and technologies
- Key industry partnerships and alliances in datacenter networking

Core Research

- Datacenter Network Forecast and Analysis
- Datacenter Switching Forecast and Market Share
- Application Delivery Controller Forecast and Analysis
- Datacenter SDN/IBN Forecast and Analysis
- Analysis and Overview of Multicloud Networking and Multicloud
- Market Assessments and Forecasts for IaaS Networking
- IT Buyer Studies: Deployment of Datacenter/Multicloud Networking
- Container Networking, Including Service Mesh Technologies
- Datacenter/Multicloud Network Customer Requirements
- SD-WAN Forecast and Analysis

In addition to the insight provided in this service, IDC may conduct research on specific topics or emerging market segments via research offerings that require additional IDC funding and client investment. To learn more about the analysts and published research, please visit: [Datacenter and Multicloud Networking](#).

Key Questions Answered

1. What are the greatest growth opportunities for datacenter network infrastructure vendors (hardware and software) in on-premises datacenters and public clouds?
2. As hybrid IT and multicloud proliferate, what challenges and opportunities are available to established vendors, cloud providers, and start-ups?
3. What are enterprise requirements for multicloud networking?
4. How and where will public clouds continue to impact the datacenter network landscape, driving new innovations and best practices?
5. What IaaS networking services from cloud giants will have the greatest market impact?
6. How will buying centers change as multicloud networking and cloud-native technologies gain wider adoption?

Companies Analyzed

IDC's *Datacenter and Multicloud Networking* service reviews the strategies, market positioning, and future direction of providers in this market, including:

A10 Networks Inc., AT&T Inc., Accton/Edgecore, Alibaba Cloud, Alkira, Amazon Web Services (AWS), Apstra, Arista Networks Inc., Array Networks Inc., Aviatix, Broadcom Inc., Celestica, Cisco Systems Inc., Citrix Systems Inc., CloudGenix Inc., Dell Technologies, Delta (DNI), Digital Realty, Equinix, Extreme Networks Inc., F5 Networks Inc., Fortinet, Google Cloud, Hewlett Packard Enterprise (including Aruba), Huawei Technologies Co. Ltd., IBM (including IBM Cloud and Red Hat), Innovium, Intel Corp. (including Barefoot Networks), Juniper Networks Inc., KEMP Technologies Inc., Marvell Technology, Mellanox Technologies Ltd., Microsoft Corp., Mode, Nefeli Networks, (New) H3C

Technologies Co. Ltd., Nokia Corp. (including Nuage Networks), Oracle Corp., Pica8 Inc., Pluribus Networks Inc., Quanta, Radware Ltd., Riverbed Technology Inc., Silver Peak Systems Inc., SnapT, Teridion, VMware Inc., Versa Networks, Verizon Communications Inc., and Volterra.
