

Worldwide Business Consulting Services

AN IDC CONTINUOUS INTELLIGENCE SERVICE

Economic and political uncertainties contribute to the myriad of business issues that must be addressed such as globalization, innovation, regulation, sustainability/ESG and ethics, talent and diversity gaps, and overall organizational transformation driven in large part by technology. Business consulting plays an essential role in helping enterprises address these issues and adapt their business strategies. Specifically, business consulting helps firms retrench with their existing capabilities, align and position for future opportunities, and envision, validate, and execute new strategies and major changes to operations. As a result, business consulting provides significant opportunities in each economic cycle. IDC's *Worldwide Business Consulting Services* research analyzes the business imperatives that drive business consulting requirements, offers predictions for consulting and advisory services players, and provides strategic guidance to help consulting and advisory services firms compete more effectively.

Markets and Subjects Analyzed

- Strategy consulting
- Operations consulting
