

Hosting and Colocation Services

AN IDC CONTINUOUS INTELLIGENCE SERVICE

IDC's *Hosting and Colocation Services* examines the dynamics of the rapidly evolving hosting market. Hosting and cloud infrastructure services are converging as businesses incorporate IaaS into increasingly hybrid IT deployment approaches. Hybrid IaaS/hosting services provide a more flexible and optimization-oriented approach to the strategic issues of IT and business transformation as well as a tactical approach to specific projects such as digital media delivery, e-commerce/web presence, and distributed enterprise applications. IDC's *Hosting and Colocation Services* explores end users' evolution from standalone hosting and IaaS toward hybrid IT environments, analyzes market trends related to multicloud deployment, and tracks shifts in the service provider landscape, including partnerships between "traditional" hosting providers and the hyperscale IaaS giants.

Markets and Subjects Analyzed

- Colocation & Network Interconnection Services
- Managed hosting and dedicated hosted private cloud
- Hybrid cloud adoption and implementation
- Service provider positioning and go-to-market strategies
