

Worldwide Quarterly Network Infrastructure Tracker

IDC's *Worldwide Quarterly Network Infrastructure Tracker*® provides a quantitative view of key network infrastructure technologies. Specifically, this tracker provides quarterly revenue based on IDC's research into the following markets: Ethernet switch, application delivery controller (ADC), ADC as a service (ADCaaS), network virtualization overlay(NVO)/SDN controller, FC switch, InfiniBand switch, router, WLAN, IP telephony, and enterprise videoconferencing and telepresence. All markets are further segmented by their place in the network and a number of deployment scenarios. The data in this tracker leverages IDC's qualitative and quantitative enterprise networking expertise to provide quarterly quantification of technology spending in the network infrastructure markets. The technology forecasts developed for this tracker take into consideration IDC's global expertise on key datacenter infrastructure trends.

Technology Coverage

The service provides total market size and vendor share for the following technology areas and segmentations. Measurement for this tracker is in vendor revenue.

Core Coverage

- **Technology:** Ethernet switch, ADC, ADCaaS, NVO/SDN controller, FC switch, InfiniBand switch, router, WLAN, IP telephony, and enterprise videoconferencing and telepresence
- **Place in network:** Datacenter and non-datacenter
- **Deployment:** Service provider (SP), enterprise, and consumer
- **Deployment type:** Cloud provider, communications SPs, and enterprise
- **Cloud deployment:** Public cloud, private cloud, and traditional datacenter
- **Architecture:** Hyperscale, non-hyperscale, and traditional datacenter

Optional Content Add-Ons

- Ethernet switch by place in network, speed (100Mb, 1,000Mb, 2.5Gb/5Gb, 10Gb, 25Gb/50Gb, 40Gb, 100Gb, and 200Gb/400Gb), product (fixed managed and modular), and vendor
- Ethernet switch ODM Direct data by vendor, product (fixed managed), and speed (1,000Mb, 10Gb, 25Gb/50Gb, 40Gb, 100Gb, and 200Gb/400Gb)

Geographic Scope

- North America
- Europe, Middle East, and Africa (EMEA)
- Asia/Pacific (including Japan) (APJ)
- Latin America

Data Deliverables

This tracker is delivered on a quarterly basis via a web-based interface for online querying and downloads. Deliverables for this tracker are listed below. For a complete delivery schedule, please contact an IDC sales representative.

- Historical data
- Forecast data
- With the purchase of IDC's *Worldwide Quarterly Network Infrastructure Tracker*, clients receive data in an Excel pivot table via idc.com and inquiry time for supporting questions regarding data usage.
- Written analyses, trend explanations, and insights are further provided by IDC's Worldwide Datacenter and Multicloud Networks Continuous Intelligence Service (CIS).

IDC's Tracker Methodology

IDC's tracker data is developed using a rigorous methodology that includes well-planned and well-coordinated local, regional, and worldwide data cross-checks combined with a proprietary advanced data consolidation and analysis data platform managed by IDC's Worldwide Tracker organization. Data sources used in the process of determining IDC's tracker numbers include, but are not limited to:

- In-country local vendor interviews
- Distribution data feeds
- Worldwide and regional vendor guidance
- ODM data
- In-country local channel partner discussions
- Import records
- Feedback from component suppliers
- Vendor briefings and public financial reports

Enabling Better Business Decisions Across the Organization

IDC trackers provide the accurate and timely market size, vendor share, and forecast information you need to identify market and product expansion opportunities, increase revenues, and win market share. IDC's tracker research is a critical input to the planning and monitoring cycles of the business process. Common uses of the tracker data include:

Planning Process

- Regional, state or city-level planning — setting regional, country, state or city-level sales targets based on market opportunity
- Product marketing — creating a product strategy and road map based on currently available product features and expected growth
- Production planning — using customer demand data as an input in the creation of production schedules
- Product portfolio planning — accessing accurate and detailed data as an input into the product development process

Monitoring Process

- Performance measurement — comparing vendor performance on prior fiscal periods
- Competitive analysis — reviewing competitor performance across multiple dimensions: product, features, channel, segment, geography
- Sales forecasting measurement — assessing internal sales forecast versus actual results
- Price benchmarking — comparing vendor versus market pricing data by model
- Marketing communications — using positive results for messaging in the press, at partner events, or in sales collateral
